Also 56 to 57 minutes, Lori was asked about the seismicity in Oklahoma. She answered well.

At 41 to 42 minutes the question of induced seismicity is raised to Dr. Howarth by Mr. Connolly. He cites seismicity in Ohio and Oklahoma that USGS 'after thorough study' has attributed this to the return of frac disposal waste. Then Dr. Howarth goes on to talk about the switch from gas to oil and the largest oil shale reserves located in central California and the Los Angeles basin, where the seismic risk 'should give everyone pause'.
